July, 2006

Prepared for the NV  
Department of Taxation  
In Conjunction with the NV  
Small Business Development

Nevada Small Business  
Development Center

The Business Assistance Network

The following pages contain Age, Sex, Race, and Hispanic Origin Estimates and Projections for the State of Nevada and its counties. The estimates are for the period of 2000 through 2005. The projections are for 2006 through 2026.

Both the estimates and projections are controlled to totals that have been previously calculated for the total population. The counties of Carson City, Lincoln, Pershing, and White Pine are controlled to the counties' total population less a correctional group quarters' population. This was done because the group quarters' population does not change and age the same as the broader non-institutional population in the county. In the case of Clark County the correctional population was not considered large enough to have an impact on these estimates and projections.

The estimates and projections are calculated through the following steps:

- 1.) The population in year one is aged forward to year two. That is, one-year olds become two-year olds, two-year olds become three-year olds, etc.
- 2.) The aging of the population includes a survival rate. That is not all 30-year olds live to become 31-year olds.
- 3.) The actual number of births are added in for the estimates. For the projections, the births are estimated based on births per thousand women of child-bearing age.
- 4.) The difference between the aged population plus births is considered to be the natural increase in the population. This is subtracted from the control total population and the gain or loss in population is considered to be accounted for by migration.
- 5.) The last step is to distribute the estimated migration by age, sex, race and Hispanic origin categories. That distribution is based on aging the 1990 population forward to 2000 and subtracting that population (1990 plus 10) from 2000. The difference between the two is considered to be accounted for by migration. For example, say after aging 20 year olds to be 30 year olds there are "X" more 30 year olds than could be accounted for by the 20 year olds aging to 30 years of age. It is thought that the difference is accounted for by immigration at some point over the 10 years as the group aged and people joined the cohort when they moved into the given county.
- 6.) The results are checked against the 2000 Census and estimated and adjusted to best approximate that distribution of the population.

In the future, additional data may be available in the future from the Census Bureau, the Social Security Administration, and local school districts that will allow for a refining of these estimates and projections.
